

Z NVR

zTECH NETWORK VIDEO RECORDER SYSTEMS

RECORD DIGITALLY
STORE SECURELY
ACCESS ANYWHERE

New IP camera technology is bringing the capability of monitoring your facilities and employees into the mainstream. The IP camera system consists of three parts:

1. IP Camera – There are several major suppliers of IP Cameras. Sony, Axis and iQeye are 3 of the larger suppliers and we are an authorized reseller of all three. These cameras are distinct from analog security cameras because they have webcams built in, allowing them to be accessed and controlled from any computer connected to the Internet.

2. Monitoring Software – This specialized software connects IP cameras into the system. This software allows for viewing multiple cameras, controlling the cameras and controlling the recording of the video. We are an authorized reseller for the leading vendor of this software, JDS.

3. Network Video Recorder (NVR) – The zTech NVR is the central hub of the camera monitoring system. This unit is a powerful Intel-based server and provides storage and connections for all cameras on the system.

FEATURES AND BENEFITS

- Access cameras from any computer connected to the internet
- INSTANT search and retrieval of video
- Capability to view full motion video from 1 to 256 cameras
- Store anywhere from one week to one year of surveillance video
- Manage recording and control of each camera separately
- Compatible with all IP cameras available on the market today
- Secure, password protected access to video

zNVR Cube

Intel Pentium 4 processors
